

DanceWave Studio v4.4

NEW!! Multi-soundcard, Multi-channel

DanceWave Studio is a very userfriendly and very easy to learn music system. Within seconds you will be able to use the software and play music. Just connect your PC or notebook with DanceWave to a mixer and play music.

DanceWave makes it very easy to select the right music you need, by using levels, dances and categories.

You can also change the tempo of the music. You can even store the adjustment in the database, so the next time you will play the song at the right speed automatically. Changing the pitch is also possible and can be set independant of the tempo.

Preparing a competition, examination, dancing, lessons or training can also be done by creating playlists. You can store playlists in the database and load and play them at any time.

All songs played are registered in a history list, so you can easely look back what is played at a certain date an play a song again.
